**Termitex<sup>®</sup>**

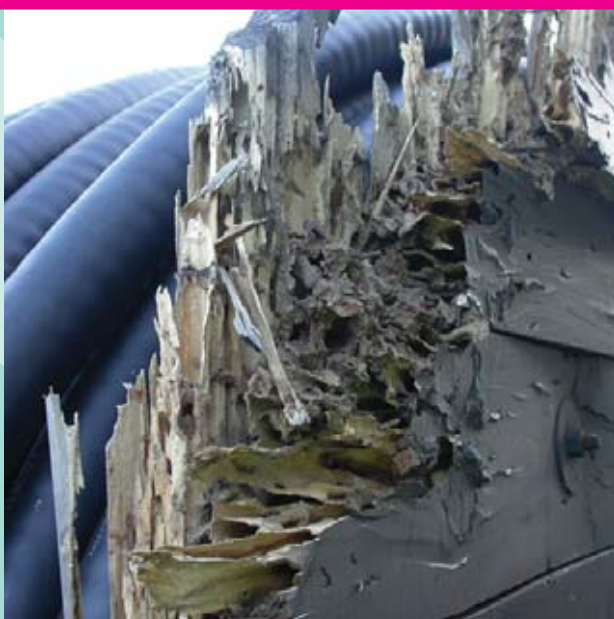

# The Ultimate Solution to Termite Attack

Termitex® is a revolutionary cable protection system from Prysmian that provides the ultimate solution to termite attack. An effective alternative to brass taping or nylon jackets, Termitex® is a proven termite repellent which can be added to the sheathing compound of many standard cables during the manufacturing process.

Termitex® is the result of years of research conducted in Prysmian laboratories in collaboration with such organisations as the CSIRO.

Termitex® provides a number of benefits over traditional methods of termite protection in its effectiveness against attack, handling and installation, cost effectiveness and compatibility to health, safety and the environment.

Termitex® protected cables are already in use in a number of major projects throughout Australia including Mica Creek Power Station & the Laverack Barracks in Queensland, the Williamstown RAAF Base in New South Wales, Broome Power Station and the Port Hedland State underground power project in Western Australia.

Environmentally friendly

Prevents termite contact with cable

An effective alternative to nylon

This photo shows a drum of Termitex® protected cable that had been stored by a customer in Western Australia.

Termites have attacked the cable drum but the cable itself is untouched.
