

## **PRYSMIAN TELECOM RELEASES NEW BLOWN FIBRE CATALOGUE IN TIME FOR CEBIT 2006**

*Milan, February 2006* – Prysmian Telecom Cables & Systems UK Ltd is releasing its new Sirocco® Blown Fibre System catalogue in time for the CeBIT exhibition at the Hannover Messe from 9<sup>th</sup> to 15<sup>th</sup> March 2006.

Prysmian Telecom will be exhibiting a range of its products during the show but with special emphasis on its portfolio for FTTH applications. These products fit well with the CeBIT exhibition, “Digital Solutions for Work and Life” which attracted almost half a million visitors in 2005 from all over the world.

The Sirocco blown fibre solution is financially attractive as a solution for FTTH networks by minimising up-front expenditure and avoiding dark fibre investment while giving considerable flexibility for change and network upgrade. It has already been successfully adopted throughout Scandinavia and is being trialled in various countries around the world, including the UK where it has long been used as an access solution for business connections. It has also been widely implemented for in-building, campus and other networks e.g. in mines and oil refineries.

The Sirocco portfolio includes all of the products required to create a complete network from fibre bundles, tube cables for a variety of internal and external applications, connectors, internal and external plant and special installation equipment and techniques.

The Prysmian stand at CeBIT will be [Hall 14, Stand F18](#).

Come and visit the stand anytime from Thursday 9<sup>th</sup> March to Wednesday 15<sup>th</sup> March at the Hannover Messe.
